AI ENGINEER

PROFESSIONAL SUMMARY

AI Engineer with hands-on experience in building Generative AI and Agentic AI applications using Python, LangChain, LangGraph, MCP, and Large Language Models (LLMs). Skilled in developing multi-agent systems, Retrieval-Augmented Generation (RAG) pipelines, AI-powered automation, and LLM-based applications using vector databases such as FAISS. Backed by 7+ years of professional experience in data analysis, automation, and solving complex real-world problems, with a strong foundation in Machine Learning, NLP, SQL, and software engineering. Passionate about designing scalable AI solutions that improve productivity and automate business workflows.

SKILLS

Programming & ML: Python, SQL, Machine Learning, Deep Learning, NLP, LangChain, LangGraph, MCP, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Vector DBs (FAISS), Flask and Streamlit

Tools & Platforms: AWS, Tableau, Excel, MySQL, GitHub

Others: Prompt Engineering, RAG, Agentic AI, LLM applications

EDUCATION

B.Tech in Aeronautical Engineering

Rajasthan Technological University, Kota | 2014 – 2018

CERTIFICATIONS

Full Stack Data Science, Almbetter – Jan 2024

EXPERIENCE

Data Analyst

Hitech Digital, Ahmedabad | Feb 2024 – Present

Analyzed and cleaned millions of aeronautical data records using SQL and Python to extract actionable insights. Built Tableau dashboards to visualize error trends and recommend process improvements.

Aeronautical Analyst

Hitech Digital, Ahmedabad | Nov 2018 – Jan 2024

Analyzed Aeronautical data from AIPs, Supplements, and NOTAMs to develop essential charts for flight operations. Ensured accurate navigation and air traffic data for flight planning systems.

PROJECTS

AI Content Studio

- Developed and deployed an Agentic AI Content Studio that automates end-to-end, research-backed blog generation using multiple AI agents.
- Built LangGraph-based multi-agent workflows for planning, web research, content generation, review, and refinement with conditional routing and parallel execution.
- Integrated LLMs, Tavily web search, Pydantic structured outputs, Gemini image generation, Flask, and Git, and deployed the application on Render.

Enterprise AI Knowledge Platform

- Developed and deployed an Enterprise AI Knowledge Platform using Flask, LangGraph, LangChain, Qdrant and PostgreSQL for intelligent, source-grounded querying of organizational documents.
 - Built an end-to-end Agentic RAG pipeline with document ingestion, chunking, embeddings, hybrid retrieval, reranking, query rewriting, citations, and LLM-based answer verification.
 - Implemented enterprise-oriented backend capabilities including conversation history, evaluation, feedback, logging, error handling, testing and Docker.
-
