AI ENGINEER

PROFESSIONAL SUMMARY

AI Engineer with 7+ years of professional experience and expertise in building Generative AI and Agentic AI applications using Python, LangChain, LangGraph, MCP, and Large Language Models. Experienced in developing multi-agent systems, RAG pipelines, AI-powered automation, and LLM-based applications with vector databases such as FAISS. Strong foundation in Machine Learning, NLP, SQL, and software engineering, complemented by extensive experience in data analysis and delivering high-quality solutions in production environments.

SKILLS

Programming & ML: Python, SQL, Machine Learning, Deep Learning, NLP, LangChain, LangGraph, MCP, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Vector DBs (FAISS), Flask and Streamlit

Tools & Platforms: AWS, Tableau, Excel, MySQL, GitHub

Others: Prompt Engineering, RAG, Agentic AI, LLM applications

EDUCATION

B.Tech in Aeronautical Engineering

Rajasthan Technological University, Kota | 2014 – 2018

CERTIFICATIONS

Full Stack Data Science, Almajest – Jan 2024

EXPERIENCE

Data Analyst

Hitech Digital, Ahmedabad | Feb 2024 – Present

Analyzed and cleaned millions of aeronautical data records using SQL and Python to extract actionable insights. Built Tableau dashboards to visualize error trends and recommend process improvements.

Aeronautical Analyst

Hitech Digital, Ahmedabad | Nov 2018 – Jan 2024

Analyzed Aeronautical data from AIPs, Supplements, and NOTAMs to develop essential charts for flight operations. Ensured accurate navigation and air traffic data for flight planning systems.

PROJECTS

AI Content Studio

- Developed an Agentic AI Content Studio that automates end-to-end blog creation using multiple AI agents.
- Built multi-agent workflows with LangGraph and LangChain for planning, research, writing, reviewing, and refinement.
- Integrated LLMs, web search, RAG, and structured outputs using Python, Pydantic, FAISS, MCP, Streamlit, and Git.

Bike Sharing Demand Prediction

- Built a regression-based ML model to predict hourly bike rental demand using weather and historical data.
- Applied preprocessing, feature engineering, and model tuning for improved accuracy.
- Enabled inventory planning and reduced supply-demand gaps.

Netflix Movies and TV Shows Clustering

- Applied K-Means clustering to group shows by genre, cast, and release year to optimize content recommendation.
 - Used pandas and seaborn for preprocessing and visualization of clustered data.
 - Provided actionable insights for enhancing user personalization.
-
